

Controlling Your Light Motor Car Made Easy

Do you know how to control your light car... Test yourself and see!

Introduction to the car's control

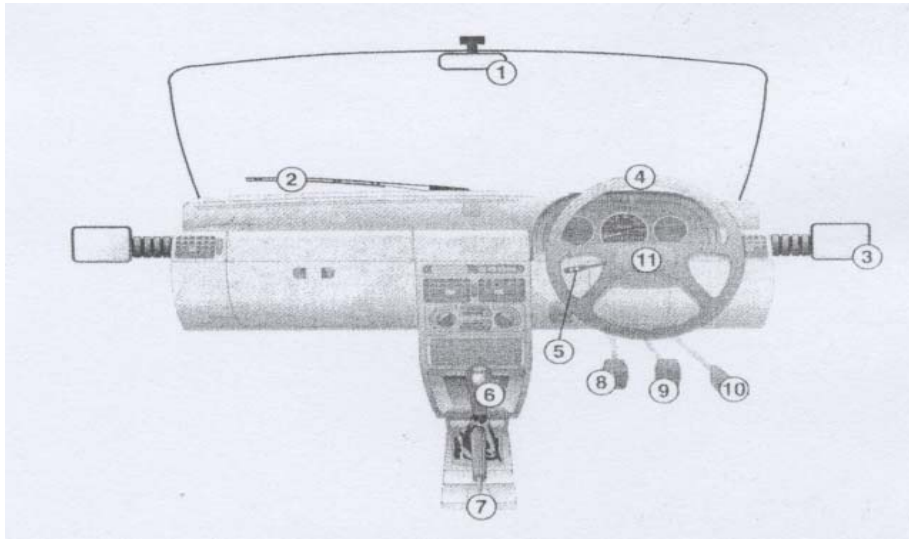

Get to know the position of all the car controls, as you will need to know them when preparing for your learners licence and your drivers test. If this is your first encounter with these controls not to worry! Because all will be explained, you can take a self-test later to see how well you know them.

1. Clutch - Used for every gear change (Please note that an automatic car will not have this control)
2. Brake - Used to stop the car
3. Accelerator - Works together with the clutch to move the car and increases the car pressure of the car to a more higher speed
4. Steering wheel - Used to turn the cars wheels to the desired direction
5. Lights - Used to brighten the driver's way if its dark or not able to see more than a 45 m away at night or in mist condition
6. Indicators - Used to make signals to the left or right direction
7. Hotter - Used to alert people and drivers in case of emergencies
8. Wipers - Used to wipe the rain off the car's windscreen for good and clear sight when driving in the rain
9. Gear lever - Used to select the desired speed car. The different speed layered out as 1, 2, 3, 4, 5 and R-reverse (depending on the type of the car).
10. Hand Brake - Used to ensure that the car does not move when left unattended or stopped.
- 11 Mirrors - The rear view- (centre) this is the main mirror check that should be used at all times and side mirrors, which are used to check the view on the left and right hand side of a driver.

Test yourself on the light car controls
